ABOUT ME

I'm a passionate full-stack developer with a keen interest in DevOps. As a trained dancer I am a very active person with a love of martial arts and gymnastics. Both of these continue to fulfil my daredevil side and made me want to get onto the British stunt register which I am working on in my free time. After finishing my bootcamp with iO Academy I started working on MadeByOn as a junior developer and I am looking forward to continuing my career.

PROJECTS

OOP project
<https://github.com/iO-Academy/2021-may-koalaCars>

A car auction site built using PHP, autoload (composer) and connecting to a database with MySQL. We architected and wrote the project using Object Oriented Programming following the SOLID principles. I worked mainly on populating the db with data from a json file using cURL, creating ViewHelpers to display the cars' data, unit testing and creating the ability to register a new car.

React To Do App
<https://github.com/AlicjaZub/ReactToDoList>

To Do Application that I created with React using a RESTful API that I made with Node.js and MongoDB

OOP Admin Portal
<https://github.com/iO-Academy/AcademyPortal>

A legacy project built using SLIM framework and MVC architecture for an admin to manage students information. It implements Dependency Injection, Factories and DIC design patterns and follows the SOLID principles. I worked on building a new security feature and improved some existing features while ensuring all existing functionality continued to work as intended

WORK EXPERIENCE

Made By ON (September 2021 - Present)
Junior Developer

- Responsibilities include:
- Writing tests for API with Redux and Jest
 - Adding Swagger to existing API
