ABOUT ME

I'm a passionate full-stack developer with a keen interest in backend and devops. As a trained dancer I am a very active person which led me to discover martial arts and gymnastics. Both of these continue to fulfill my daredevil side and made me want to get onto the British stunt register which I am working on in my free time. I love challenges and learning new things and programming takes them both to a new level which led me to start my journey with iO Academy. Having completed it I am now very excited to start my career with a company as a software developer.

PROJECTS

OOP project

https://github.com/iO-Academy/2021-may-koalaCars

A car auction site built using PHP, autoload (composer) and connecting to a database with MySQL. We architected and wrote the project using Object Oriented Programming following the SOLID principles. I worked mainly on populating the db with data from a json file using cURL, creating ViewHelpers to display the cars' data, unit testing and creating the ability to register a new car.

React To Do App

https://github.com/AlicjaZub/ReactToDoList

To Do Application that I created with React using a RESTful API that I made with Node.js and MongoDB

OOP Admin Portal

https://github.com/iO-Academy/AcademyPortal

A legacy project built using SLIM framework and MVC architecture for an admin to manage students information. It implements Dependency Injection, Factories and DIC design patterns and follows the SOLID principles. I worked on building a new security feature and improved some existing features while ensuring all existing functionality continued to work as intended

WORK EXPERIENCE

Business Development Executive

London Advantage Limited

(November 2020 - Present)

Responsibilities include:
